| Project Name | Emerging Methods for Early Detection of Forest Fires. |

Solution Architecture:

Solution architecture is a complex process – that may fills the gap between business problems and technology solutions. Its goals are to:

- To solve the existing business problems we have to find the best solutions.
- Describe the structure, characteristics, behavior, and other aspects of the software to project stakeholders.
- Define features, development phases, and solution requirements.
- Provide specifications according to which the solution is defined, managed, and delivered.
